Section 4: Unified Wireless- Converged 175
Section 5: Identity Management 177
Section 6: Prime Infrastructure and MSE 178
Section 7: Media Applications 180

Workbook Introduction

This workbook contains 5 mock labs that are designed to help you practice what it's like to take the actual CCIE wireless lab exam. Each mock lab contains both the 1-hour diagnostic section as well as the 7-hour configuration section. While these labs aren't intended to replicate the content of the lab, they are intended to replicate the look/feel of the lab and to test your knowledge to see if you are ready to take the lab.

As you do these mock labs, don't feel that you have to always treat them exactly like the real lab. It's rare that the first time that you do a mock lab that you'll be able to finish everything in the normal time limits. So I encourage you to allow yourself extra time to begin with. Also, don't be afraid to look up the answers when needed in the accompanying Detailed Solutions Guide. To begin with, it's more about practicing and getting a process figured out. Once you have a good handle on your process, and you have a few labs under your belt, then you could choose to try and place the same restrictions on yourself that you would have in the real lab.

If you have the time, I would recommend going through the workbook twice. The first time, it's more for practice and you can break whatever rules you'd like. The second time, try to go through it as if it was the real lab and see how well you do. But if you don't have the time, maybe just give yourself a couple of labs to get used to things where you can break restrictions/ rules. Then the last 3 can be done as if it was the actual lab.

Be sure to watch the Lab Video Series 2, which is a companion to both this workbook and workbook volume 2. In that series, you will find videos talking about tips and strategies for taking the lab that can be applied to your mock lab practicing. It's important that you use these mock labs not only for gauging your lab readiness, but to practice the act and processes surrounding taking the lab. So practice recording your progress and what sorts of diagrams/ notes you may want to use. Practice using 2 monitors if you can and figure out how you want to arrange all of your windows. Figure out how you want to handle getting stuck when troubleshooting an issue. You don't want to be figuring that stuff out or doing things for the first time in the actual lab if you can help it.

Finally, be sure to read the introductions for each lab. There will be instructions for staging up the WIN7 client as well as general rules/restrictions that you will need to follow during the lab.
